one of nursing team.

The *Reversal* Process

A woman who regrets her decision after taking the first pill can save her pregnancy, but time is of the essence!

Progesterone is administered to reverse the effects of the abortion pill.

An ultrasound confirms viability of the baby.

Progesterone treatments continue for a minimum of two weeks.

Ongoing support continues through a referred local pregnancy center.

Why She Calls the *Helpline*

- 1 Scared, but just took the pill and **she wants to save her pregnancy.**
- 2 **Boyfriend made her** take the abortion pill.
- 3 **Abortion facility said it's too late,** she has to take the second pill.

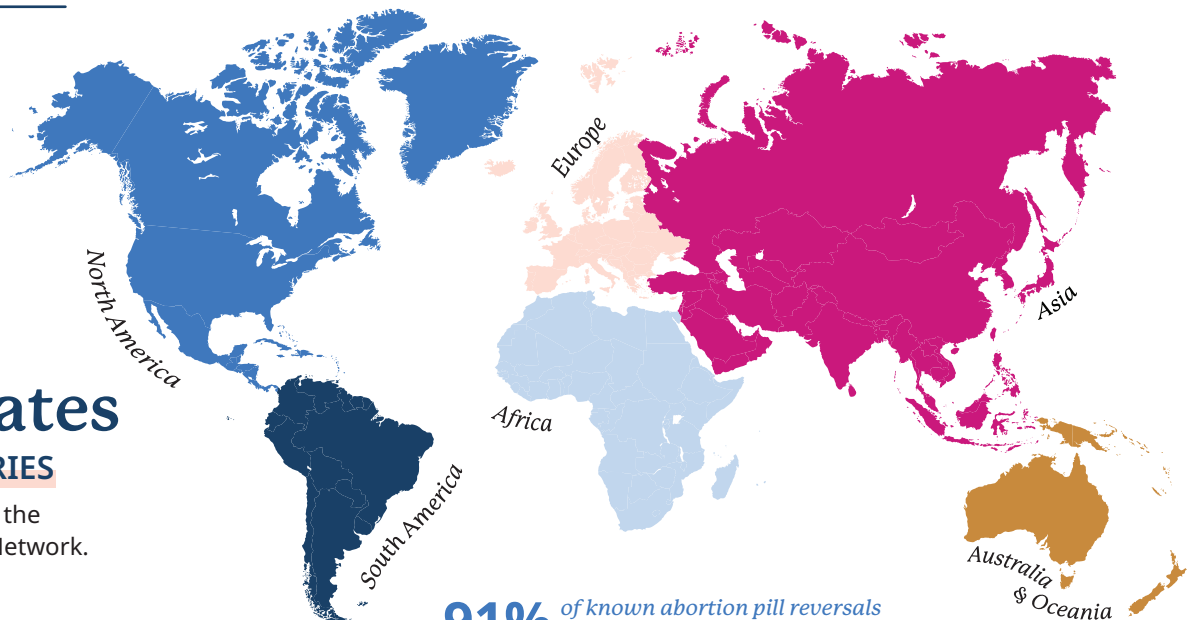

Global Reach

WOMEN IN ALL

50 states

AND 96 COUNTRIES

have been assisted by the
Abortion Pill Rescue® Network.

91% of known abortion pill reversals occur in the United States.
